

Thank you for purchasing the Antenna Mod Kit for your Phantom 2 Vision Plus

**Phantom 2 Vision Plus Range Extender Antenna Installation Instructions:**

1. No Soldering required (here is the list of tools you will need)

Phillips screw driver

8mm Open End Wrench

Allan Wrench

**The top and bottom of the range extender will separate after unscrewing 4 bolts and priming it with a screw driver. Please note there are 2 clips in the middle that will hold it closed, use a flat screw driver to get it open.**

Next use a small Phillips screw driver to remove 4 little screws and unplug the 2 antenna cable and then carefully remove the board away from the USB and power switch.

Next you will need to drill 2 - 1/4 inch holes on each side of the plastic box as shown on the pictures.

**Use a sharp knife to clean the plastic up.**

**Next install the board back on and the cables.**

**Clip the small connectors in and tighten the nuts using 8mm or 5/16 small wrench. Make sure to hold the cable on the opposite side with long nose pliers in order to avoid spinning!**

**Close the box back up, make sure the cables are connected and everything is put back the way it was (black rubber piece must be placed back in).  
Turn the power on to make sure everything is working!**

**Put all the screws back in and you ready to FLY again. It will close a bit harder due to the cables taking some space now.**
